Suven Life secures Three (3) Product Patents in Israel, Japan and South Africa

HYDERABAD, INDIA (June 30, 2015) – Suven Life Sciences Ltd (Suven) announces today that the grant of **one (1) product patent from Israel (218525), one product patent from Japan (5714729) and one (1) product patent from South Africa (2013/09100)** corresponding to their New Chemical Entities (NCEs) for the treatment of disorders associated with Neurodegenerative diseases.

The granted claims of the patents include the class of **selective 5-HT compounds discovered by Suven** and are being developed as therapeutic agents and are useful in the treatment of cognitive impairment associated with neurodegenerative disorders like Alzheimer's disease, Attention deficient hyperactivity disorder (ADHD), Huntington's disease, Parkinson and Schizophrenia.

With these new patents, Suven has a total of **six (6) granted patents from Israel, seventeen (17) granted patents from Japan and twenty (20) granted patents from South Africa**. These granted patents are exclusive intellectual property of Suven and are achieved through the **internal discovery research** efforts. Products out of these inventions may be out-licensed at various phases of clinical development like at Phase-I or Phase-II.

“We are very pleased by the grant of these patents to Suven for our pipeline of molecules in CNS arena that are being developed for cognitive disorders with high unmet medical need with huge market potential globally” says Venkat Jasti, CEO of Suven.

Suven Life Science is a biopharmaceutical company focused on discovering, developing and commercializing novel pharmaceutical products, which are first in class or best in class CNS therapies through the use of GPCR targets. **The Company has eleven (11) internally-discovered therapeutic drug candidates currently** in pre-clinical stage of development targeting conditions such as ADHD, dementia, depression, Huntington's disease, Parkinson's disease and obesity in addition to Phase 2 ready **developmental candidate SUVN-502 for and Phase1 candidate SUVN-G3031 for Alzheimer's disease and Schizophrenia**.
