Suven Life sciences announces Phase 3 Clinical Trial of SUVN-502 (Masupirdine), a 5-HT₆ antagonist for treatment of Agitation and aggression in Alzheimer's type dementias

HYDERABAD, INDIA (Aug 16, 2021) – Suven Life Sciences today informing that our NCE SUVN-502 (Masupirdine), a potent, selective, brain penetrant and orally active, novel chemical entity has planned initiation of global Phase 3 clinical trial for the treatment of Agitation and aggression in Alzheimer's type dementias with expected enrollment of patients from middle of September 2021. This multi-center study (sites in the US and Europe) comprising about 387 patients is likely to be completed in about 36 months and the topline result expected by the end of year 2024.

“Progression of SUVN-502 (Masupirdine) into Phase 3 clinical development is a significant achievement and milestone in enhancing our clinical pipeline. Our lead molecules address niche areas of cognitive impairment associated with neurodegenerative disorders”, said Venkat Jasti, CEO of Suven Life Sciences.

SUVN-502 (Masupirdine), a lead clinical candidate having undergone phase 2 study on 564 patients for moderate Alzheimer's disease without meeting primary end point. After an in-depth analysis of the data and intense dialogue with key opinion leaders, we have planned a new Clinical Trial for the treatment of Agitation and aggression in Alzheimer's type dementias.

Prior to the initiation of Phase 2A study, SUVN-502 has successfully undergone two phase 1 studies in Switzerland and USA on 122 healthy young and elderly male populations with no major adverse events and no serious adverse events.

About Suven Life Sciences

Suven Life Science is a biopharmaceutical company focused on discovering, developing, and commercializing novel pharmaceutical products, which are first in class or best in class CNS therapies using GPCR targets. Suven has 4 clinical stage compounds, this Phase 3 SUVN-502 for Agitation and aggression in Alzheimer's type dementias, ongoing Phase 2 SUVN-G3031 for sleep disorders (Narcolepsy), Phase 1 completed SUVN-911 for Major Depression and Disorder (MDD) and Phase 1 completed SUVN-D4010, a Dual Mechanism of Action (Disease Modifying and Symptomatic Treatment Potential for AD) Gastro-Intestinal Motility Disorders. Apart from this Suven has 11 molecules in development pipeline.
